

Company Presentation

Innovate  
the Future

Private consultancy for sponsors and investors raising capital.

—

We design technology-empowered frameworks that help investors and sponsors make better capital decisions.

# About Gritseek

Gritseek serves clients navigating increasingly complex capital and regulatory environments.

As capital becomes more global and regulatory expectations intensify; structural coherence and governance integrity have become central to successful execution.

We operate as a discreet advisory, consultancy and operative partner to;

- A. Construct AI powered interactive tools that integrate data-driven valuation, scenario forecasting, and risk diagnostics in a coherent decision framework to increase successful investment decisions;
- B. Design and implement institution-ready frameworks that protect credibility, mitigate risk, and position capital for disciplined, sustainable growth;
- C. Execute complex cross-border transactions with institutional discipline.

# The Market Gap

## 1. Capital and Opportunity Rarely Speak the Same Language

Many viable projects fail to attract capital because they are not presented in a form investors can underwrite confidently.

## 2. Capital Structuring is Fragmented Across Advisors

Raising institutional capital typically requires multiple specialized functions usually delivered by separate advisors (lawyers, consultants, bankers, accountants) who work in silos — leaving sponsors to coordinate the process without the required institutional experience.

## 3. Investors Require Institutional-Grade Frameworks

Professional investors — including private equity, family offices, and funds—do not invest solely in opportunities. They invest in structures they can trust.

## 4. Cross-Border Transactions Create Additional Complexity

Modern investment opportunities frequently span multiple jurisdictions, introducing challenges — Without a **coherent architecture**, cross-border deals become difficult for institutional investors to engage with.

# Why Gritseek

**Gritseek builds the frameworks that allow capital to engage with confidence.**

## **1. Capital Raising**

We design the strategy and assemble the data required to position an opportunity for capital.

## **2. Capital Structuring**

We design the financial architecture through which capital participates in an opportunity.

## **3. Compliance and Governance**

We establish the governance and regulatory frameworks that enable investors to engage with confidence.

## **4. Cross-Border Transaction**

We facilitate and coordinate the structural and operational elements required to execute fast, customizable transactions across jurisdictions.

# Integrated Services

## Capital Strategy & Intelligence:

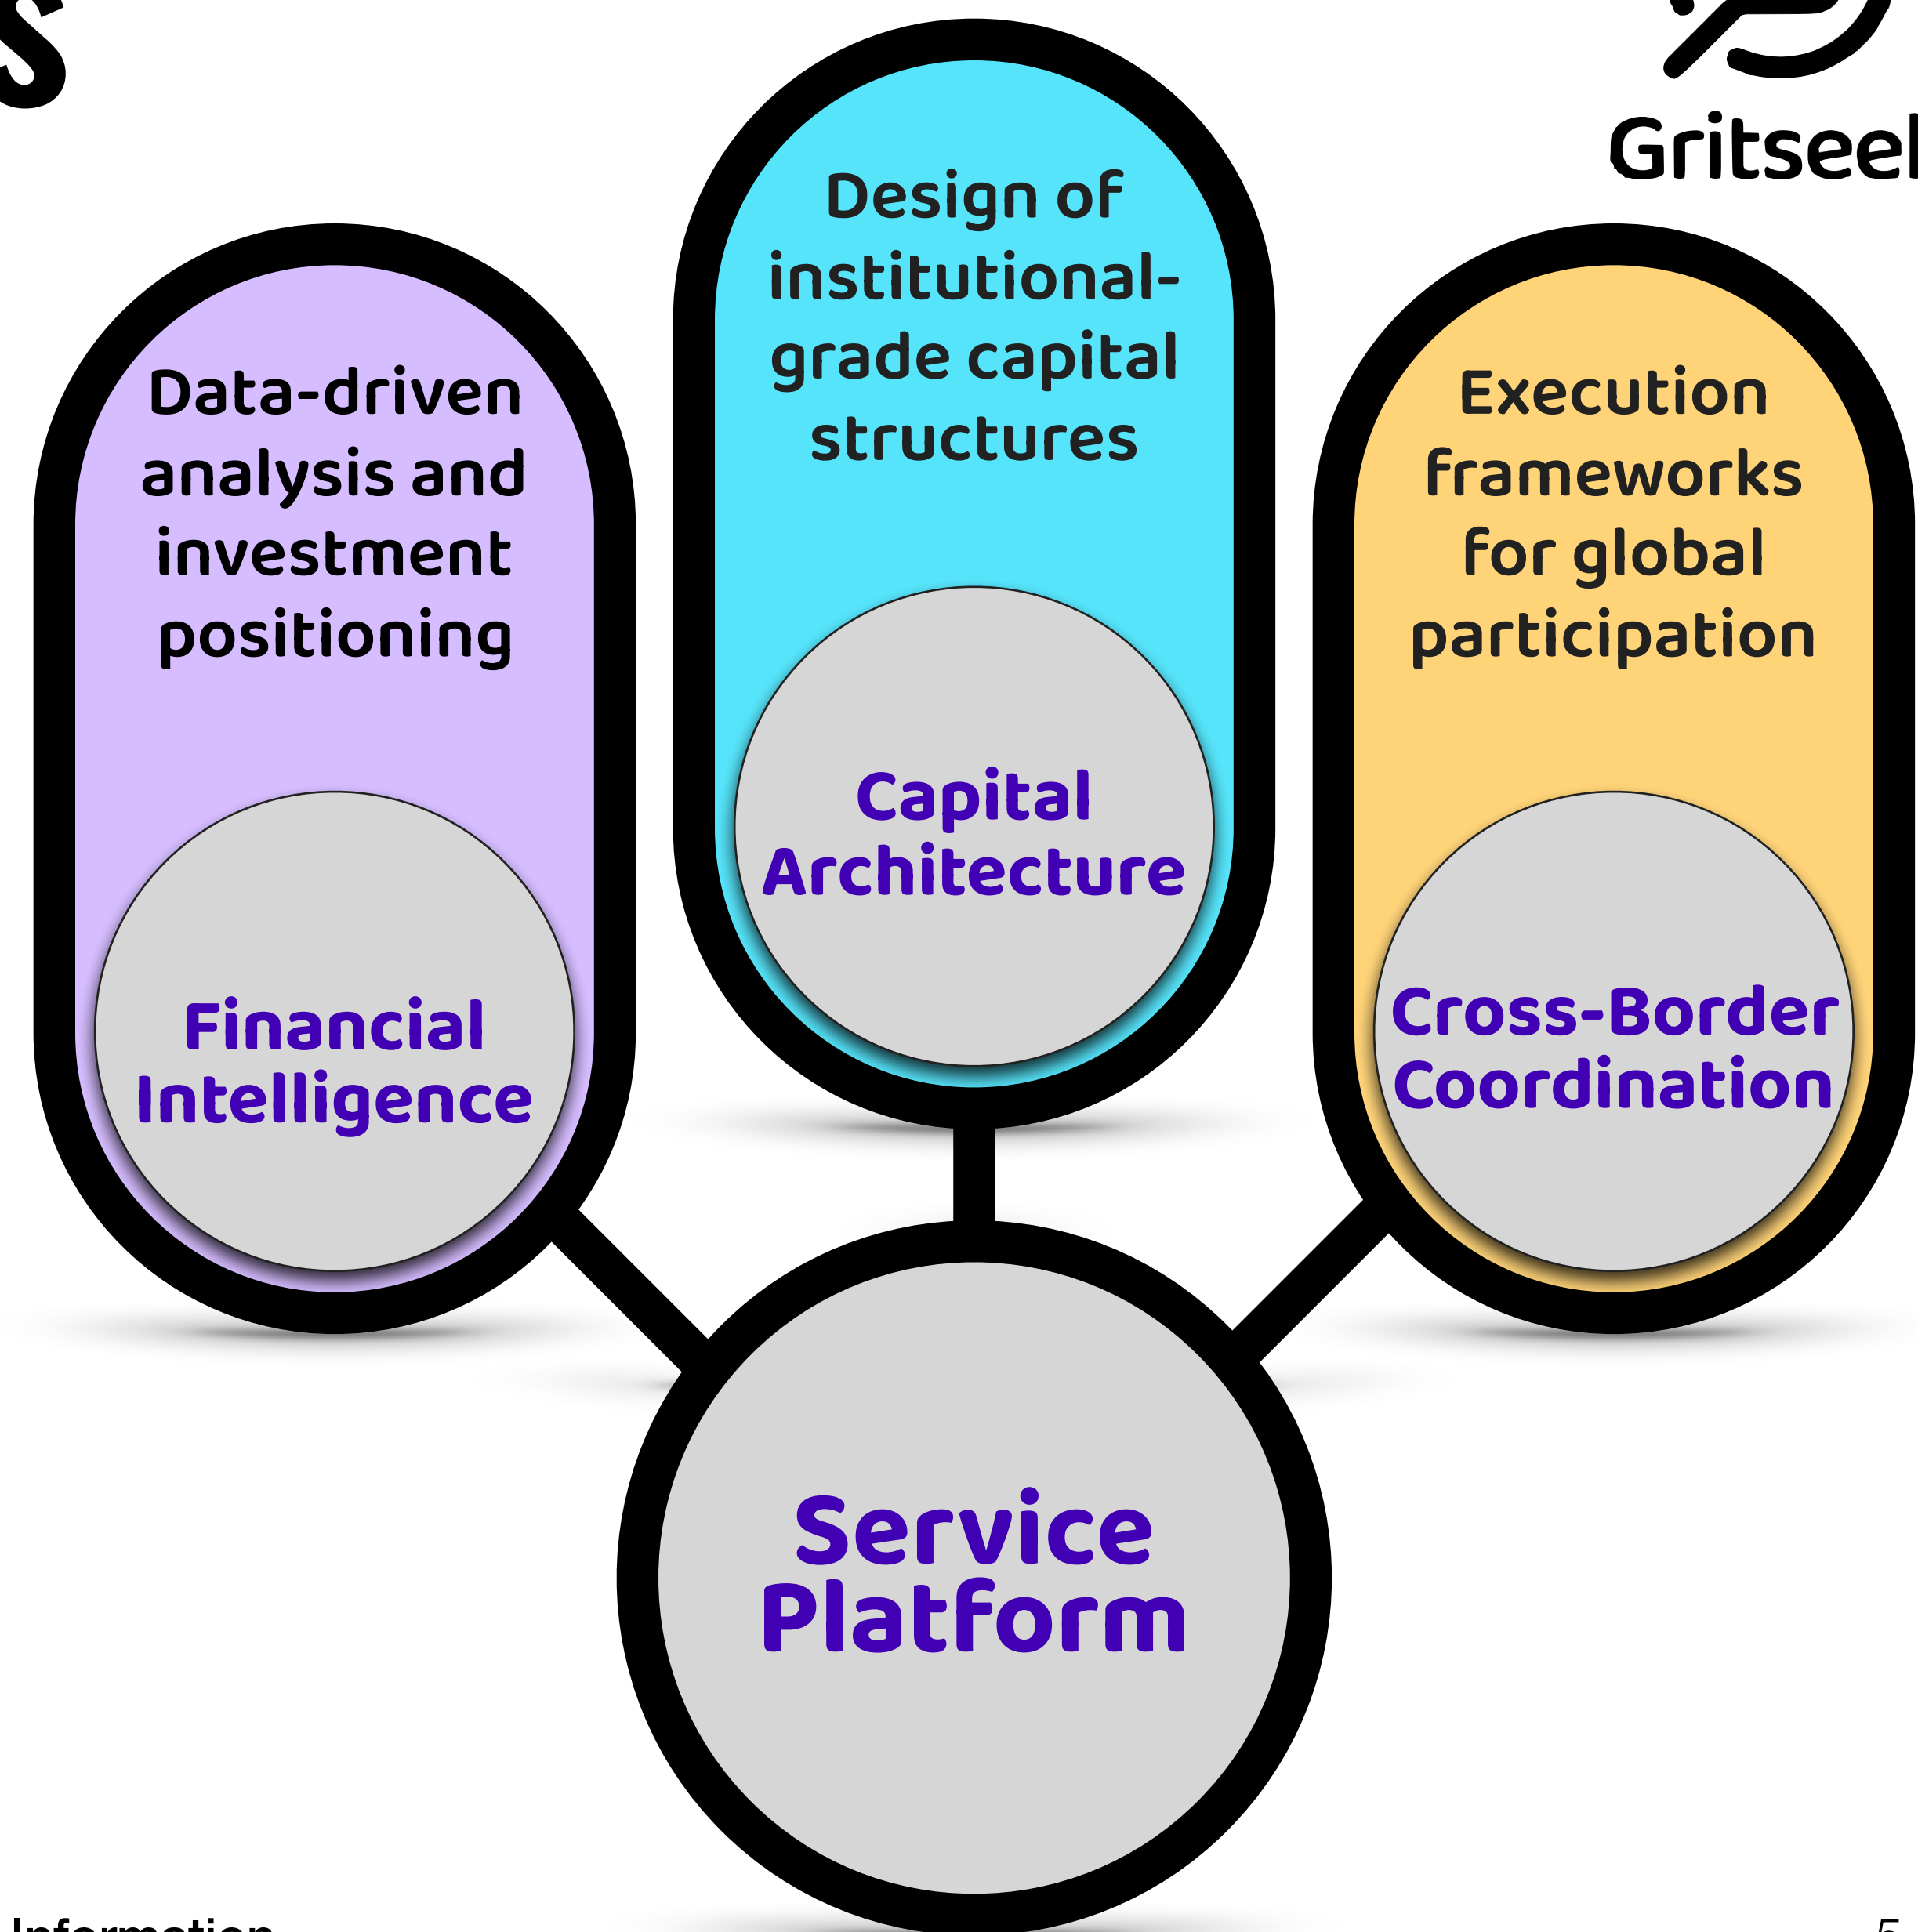

Translating complex financial variables into structured intelligence that supports disciplined capital allocation.

## Capital & Governance Architecture:

Designing capital and governance frameworks that align ownership, control, and regulatory considerations across jurisdictions..

## Cross-Border Capital Facilitation:

Coordinating cross-border capital engagement within structured and compliant transaction frameworks, with minimal friction.

# Point of Engagement

Effective capital raising begins by speaking the investor's language and addressing their priorities, risk framework, and institutional language – not the beneficiaries narrative.

## **Gritseek Project Finance Tool (GPFT)**

In amplifying investment success, **GPFT** is an integrated, AI-assisted analytics tool combining historical financial control, econometric valuation, scenario forecasting, and market quantification into a single decision framework.

Rather than presenting projections alone, GPFT delivers structured financial intelligence via an interactive dashboard that allows investors to adjust and model data.

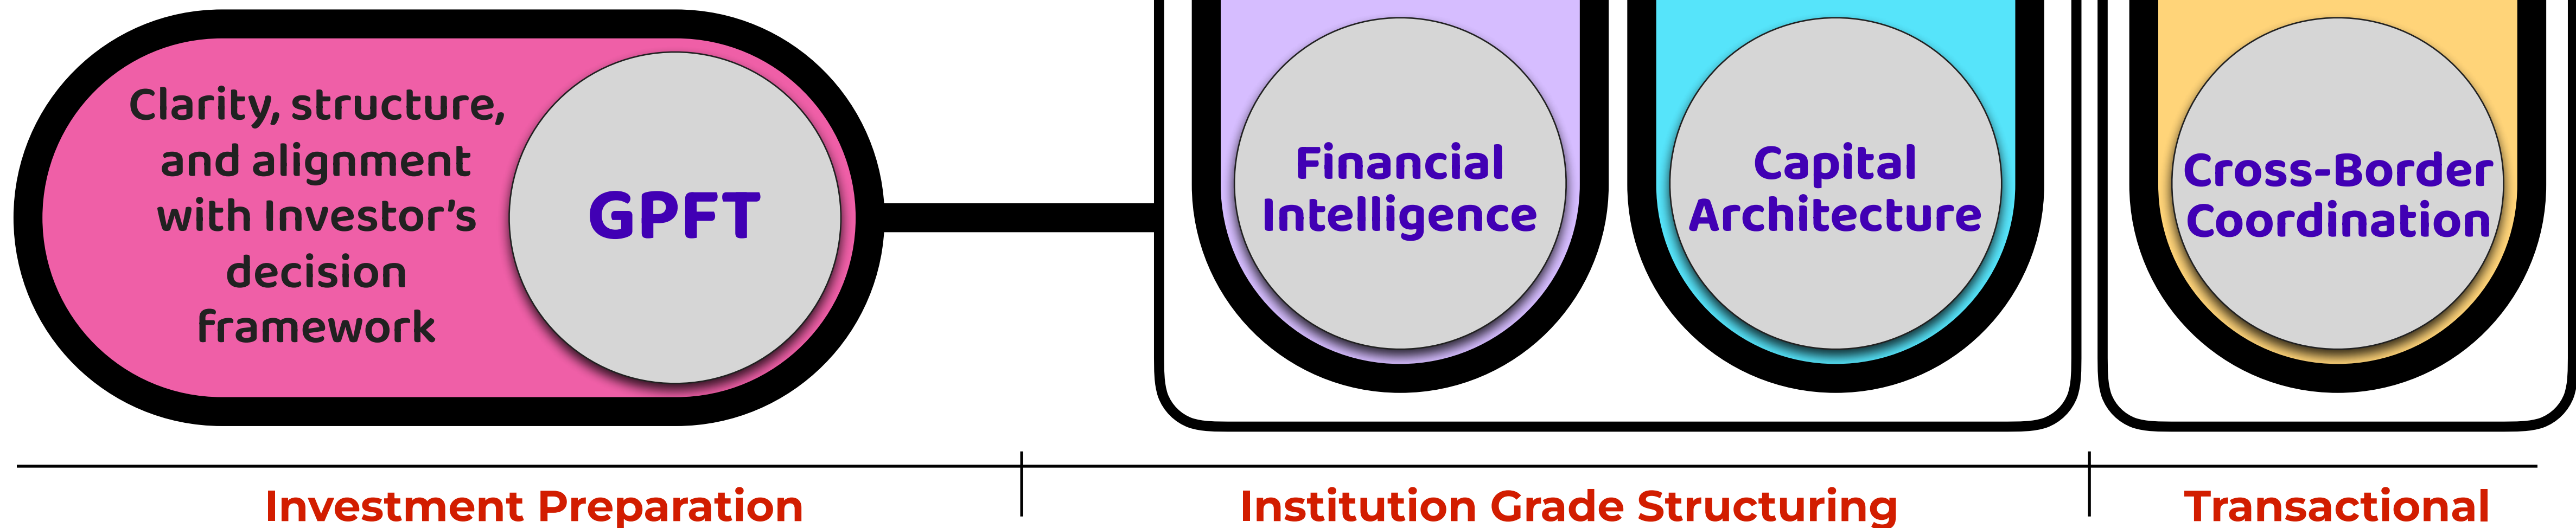

**The Outcome;** complex financial variables translated into clear, defensible intelligence – de-risking investments, optimizing capital allocation, and enabling all stakeholders to engage with greater transparency and institutional confidence.

# A Unified Capital Raising Solution

**Raising Capital requires a systematic approach.**

It starts with addressing risk, return, and governance expectations, in the language and perspective of the investor.

# GPFT Stakeholder Benefits

## For Sponsors & Project Owners

### GPFT:

- Presents opportunities in investor-aligned models and interests
- Substantiates valuation with defensible analytics
- Identifies structural risks before institutional scrutiny
- Optimizes capital structure and funding strategy
- Strengthens credibility during due diligence

Benefit: A more compelling, institution-ready investment case that improves capital access and negotiation positioning.

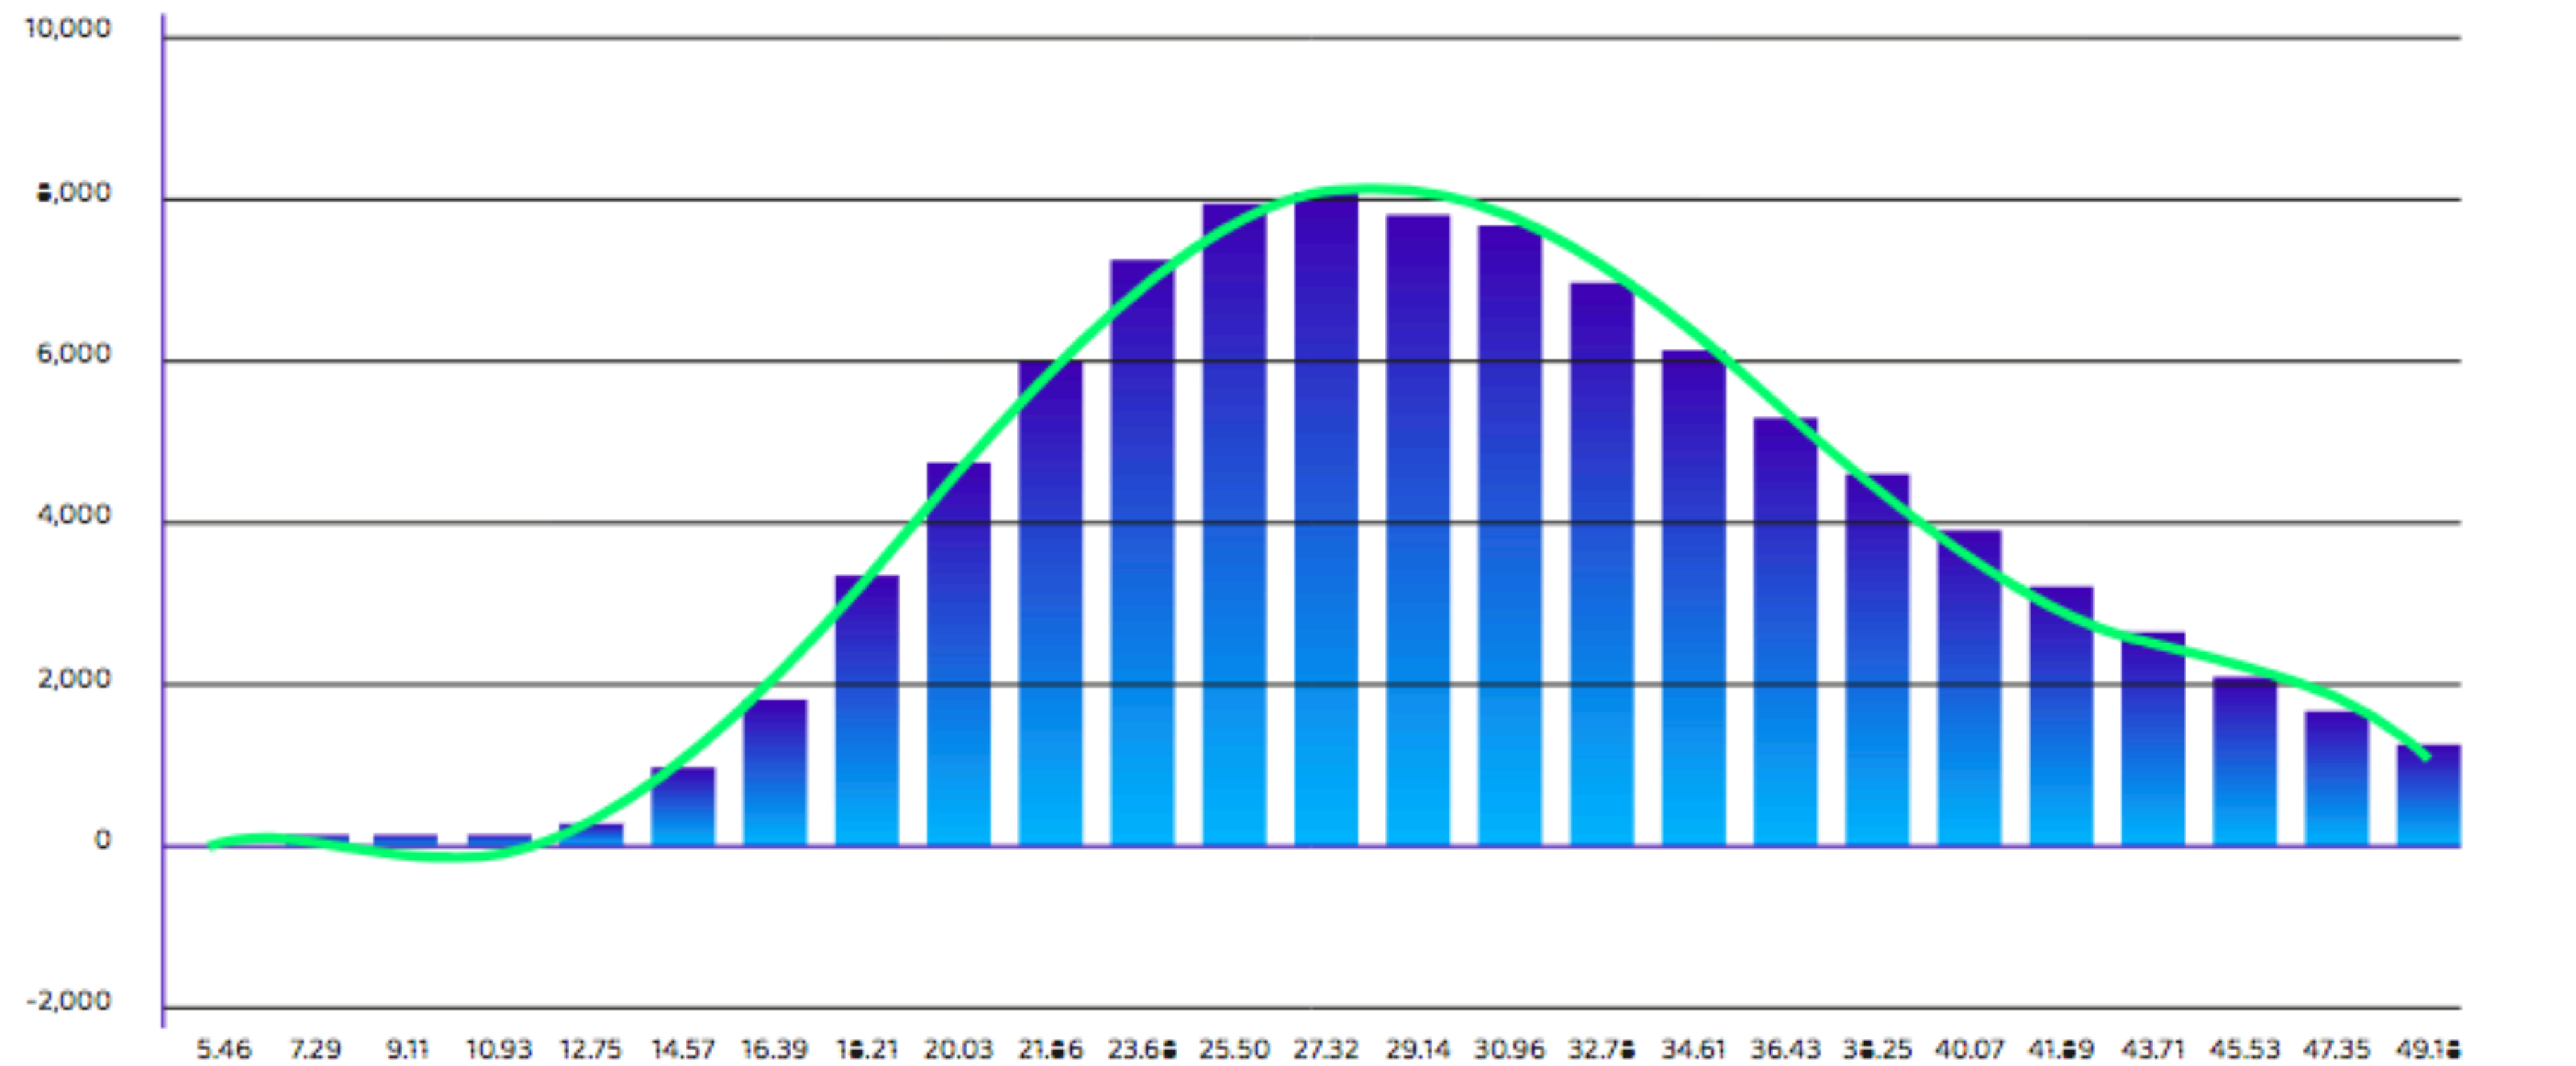

## For Investors & Capital Partners

### GPFT:

- Evaluates opportunity through structured, data-backed valuation
- Stress-tests assumptions under multiple scenarios
- Quantifies downside risk and market sensitivity
- Compare capital allocation alternatives with clarity
- Proceeds with disciplined, evidence-based confidence

Benefit: Reduced uncertainty, improved capital discipline, and stronger governance over deployment decisions.

# Monte Carlo polynomial simulation

The Monte Carlo simulation is an example of an interactive GPFT aid which allows investors to visualize a wide range of Risk Assessment parameters by modelling how different variables interact over time, to comprehensively determine the probability of the investment success.

# How We Work

Gritseek's consultancy is disciplined and sequential, designed to ensure every transaction is credible, defensible, and institution-ready.

## Structural Design

Foundation Before Exposure

We begin by mapping the financial and governance framework of a transaction.

**Outcome: A clear, durable blueprint ready for institutional consideration**

## Governance & Compliance Integration

Embedded Defensibility

Compliance is built into the design, not added afterward.

**Outcome: Institutional credibility and defensible governance**

## Cross-Border Alignment

Seamless Execution Across Jurisdictions

We coordinate structures for smooth cross-border operation.

**Outcome: A structure that functions seamlessly across borders**

## Discreet Execution

Selective Engagement

Where mandated, we assist in controlled engagement with institutional partners.

**Outcome: Reduced friction, preserved credibility, controlled exposure**

# Who We Serve

## **UHNWI/HNWI - Family Offices - Global Institutions.**

- Principals managing significant capital
- Family offices structuring co-investments
- Sophisticated investors seeking defensible participation
- Private Equity firms requiring investment vetting
- Institutional counter-parties requiring governance-aligned frameworks

# In Closing

## Capital is Mobile. Credibility is Not.

Gritseek takes a tiered approach to investment success by starting with a tool that enables investors to evaluate opportunity and stress-test assumptions, getting to a more positive principal/investor dialogue, faster.

We then build durable frameworks institutions can engage with confidently — for principals who prioritize governance and long-term positioning over speed.

Gritseek is not engaged to accelerate transactions. We are engaged to ensure they endure.
